Inventory Management

Optima is a modular purchasing and stock control system that controls inventory, improves customer service and manages suppliers, ensuring products are available when required and cash flow is improved.

Optima is proven to help businesses increase sales and manage stock effectively.

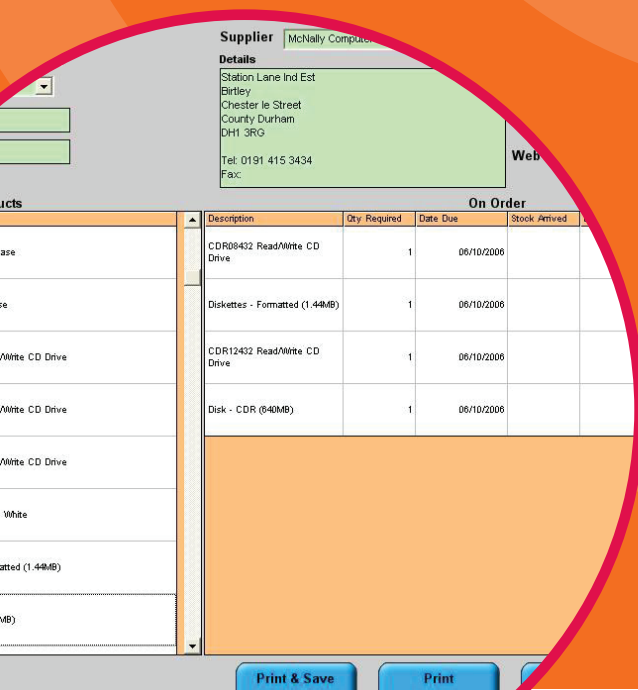

Optimum Stock Levels

Optima stores trigger levels to prompt re-ordering, and will create purchase orders automatically if required, so you always hold the optimum stock levels to meet customer demand. The Optima system also enables you to view all outstanding orders and edit orders whilst awaiting delivery, ensuring flexibility and reducing administration.

Exceed Customer Expectations

Optima helps you to manage varying contracts and delivery expectations quickly and effectively across multiple locations. Effortlessly update customers on delivery schedules, flag pending and outstanding orders and continually monitor performance.

Optima

Manage Multiple Suppliers

The Optima solution enables efficient monitoring and management of multiple suppliers. Store supplier contact information and notes, search for suppliers by name or postcode, and view all orders against supplier. Optima allows you to bulk load supplier product catalogues and pricing structures, reducing processing time and increasing efficiency.

Features of Optima

- Set trigger levels to prompt re-ordering
- Speed up stock taking with simple scan, check and update facilities
- Assign customers pricing levels to ensure consistency and reduce errors
- Manage single/multiple locations and delivery requirements
- Manage multiple contracts with suppliers and customers
- Track and integrate web, retail and business to business sales
- Automatically generate barcodes for products as required
- Raise orders for stock due in, reduce holding time and free up cash flow
- Produce meaningful management information
- Choose from a range of EPOS terminals and barcode scanners or upload to your existing hardware for retail & leisure environments
- A modular system with bolt on options. Upgrade the system as your business grows
- Integrate with various accountancy packages

Improve Supplier Performance

Monitor supplier performance by contract, product category, or customer contract. Identify areas for improvement so that you can focus supplier efforts. Track improvement levels and achievement of targets.

Integrate with Purchasing & Accountancy Systems

Optima will integrate with your existing accountancy systems. A seamless interface reduces administration and the margin for error but most importantly speeds up order processing and invoicing, helping you to increase efficiency.

EPOS

Your Optima solution can incorporate Handheld EPOS Scanning Devices, Touch Screens, Cash Drawers, Barcode Readers, Line Displays and Receipt Printers as required for retail and trade counter use.

Reduce Administration, Increase Efficiency

The complete Optima system will automatically create Picking Lists, Delivery Notes & Pro Forma invoices, dramatically reducing administration and increasing efficiency.

Platform Requirements for Optima

Optima is suitable for a wide range of environments and can be installed on any PC with Windows 2000, XP, Windows Server 2000, Windows Server 2003 or Windows Vista operating system, with a minimum of 256Mb RAM and minimum screen resolution 1024x768.
